Mobile communications solution unable to call or text?

Hardware : EB118 - Mobile Comms Technology Solution

Symptoms :

I can not get the mobile comms system working.

Cause :

- (1)The green light on the GM29 module comes on and stays on.
 - (2)I have used this program before and it worked then.
 - (3)The hardware is incorrectly connected together.
-

Solution :

- (1)You need a SIM card which is a pay-as-you-go SIM card - a SIM card with a contract will not work.
 - (2)Check the sim card is present,and has enough credit to cover the cost of the call.
 - (3)A list of further things to check
 - Is the aerial connected?,
 - Is the power connected?,
 - Is the RS232 connected properly?,
 - Is the Multiprogrammer in the right oscillator mode?
 - Is the Modem connected to the right port of the RS232?
 - Are the signals coming along the right pins (PATCH systems)?
- Unique solution ID: #1007
